Q: Best relationship advice for patients and caregivers fighting cancer?

A: Communicate and show gratitude. If you value something about your partner, say it. Don’t be afraid to be vulnerable.

WENDI GEORGE HAWKINS
Caregiver

A: The diagnosis is so much more than just physical. Both patient and caregiver will go through so much mentally and emotionally. Try to support each other through the battle.

DAWN BLATT
Stage III survivor

A: You will do things for your partner that you never could have imagined. You need as many advocates as you can find. Take time for yourself and don’t feel slighted when the patient wants to be alone every now and then.

ANNA BOYLE SQUITIERI
Stage III survivor

A: The diagnosis is so much more than just physical. Both patient and caregiver will go through so much mentally and emotionally. Try to support each other through the battle.

DAWN BLATT
Stage III survivor

A: You will learn what intimacy really is, what it means to love till death do us part. You will learn to cherish every moment and turn every opportunity into a memory that your loved one can forever hold on to.

FREDERICK SCHILLER
Caregiver

A: When giving support to a cancer patient, be positive. Take one day at a time, don’t look too far forward. For example, if a patient is in treatment, instead of counting ahead 12 sessions, focus on the recovery from the most recent treatment.

MICHAEL TOMKO
Stage III survivor

A: Practice patience. Cancer will change the patient and the caregiver in different ways. Use open communication because the scale of vulnerability will sway.

YASMEEM WATSON
Stage III survivor

Stronger Together

I don’t cry often, but one breakdown I’ll never forget is the day I was in a virtual meeting with Fight CRC’s President Anjee Davis and I lost it.

Technically, she was my boss at the time. But she was also a friend, and the emotional toll of facing colorectal cancer professionally and personally had become very heavy. My strength completely collapsed and my tears told the real story. I was struggling.

Anjee stopped everything across the screen to listen, affirm my struggle, and challenge me to put my health first. She encouraged me to reevaluate my boundaries, set limits, and take time to reflect on what I needed as a survivor. It was powerful and healing. Neither one of us expected that a few years later, the tables would turn. This past February, she was diagnosed with early-stage breast cancer and I became one of her many friends to help her face it.

No one fights alone. This is a popular phrase and hashtag around Fight CRC. We’ve carried this up Capitol Hill steps, to the tops of mile-high mountains, and across our screens during a global pandemic. And truly, we mean it. We are healthier and more relentless when we accept support. Even in a world of social distancing, we come together. As we head into spring and summer, which will undoubtedly be full of more changes and new normals, may we remember that although challenges come, we’re stronger when we choose to be vulnerable and accept support. We are stronger when we fight together.

Watch Anjee

Share her story about being diagnosed with early-stage breast cancer earlier this year.
LEHMAN goes to WASHINGTON, D.C.

In October 2019, PGA Tour Professional Golfer Tom Lehman went to Washington, D.C., to share his story of surviving stage I colorectal cancer with policymakers. He met with Members of Congress and their staff, and he even had the opportunity to meet with the president. He discussed the importance of access to timely colorectal cancer screening and his efforts were successful! A few months later, the administration announced that it was supportive of policy to close the so-called “Medicare loophole” to ensure that seniors do not face out-of-pocket costs if they go in for a screening colonoscopy and polyps are removed. Additionally, this past March, the president issued a proclamation declaring March as Colorectal Cancer Awareness Month.

THANKS TOM FOR BEING SUCH AN amazing ADVOCATE!

State Advocacy

Advocacy isn’t just federal for us, it’s getting local! This spring we launched the Catalyst State-by-State Advocacy Program. The program aims to accelerate progress toward turning aspirational colorectal cancer screening goals into reality by increasing access and reducing barriers at the state level.
Tackling Early-Age Onset Colorectal Cancer

Fight CRC hears the urgency from our community to better understand early-age onset colorectal cancer, and we're doing something about it.

Through dedicated advocacy efforts, we’ve started to work with key players in this field such as the Department of Defense (DoD) and the National Cancer Institute (NCI) to address the rise in young-onset colon and rectal cancers. We’re also working with international groups to address the rise from a global perspective.

The workgroup will reconvene virtually in June 2020 with partners from more than twenty countries for the second Early-Age Onset CRC International Symposium, hosted by Dr. Jose Perea of the Jiménez Díaz Foundation University Hospital in Madrid.

RESEARCH proves SUPPORT MATTERS!

A recent study on women and social support backed up what researchers already presumed: There’s a role for social support when it comes to patients with serious illness.

Amongst women who reported low social support, there was a higher mortality from colorectal cancer specifically. “These findings support the idea that women who have supportive friends and family around them when they are diagnosed do better,” said Candyce Kroenke, MPH, ScD, a research scientist with the Kaiser Permanente Division of Research.

*DID YOU KNOW?

Women who have supportive friends and family around them when they are diagnosed have better outcomes.
Palliative care supports people living with colorectal cancer.

A cancer team focuses on treating or curing the source of the cancer. A palliative care team works to understand your goals of care, what gives you joy in your daily life, and ways to have the best quality of life possible. Palliative care doctors are specially trained in communication skills—how to interact with you and your caregiver or family, as well as coordinating with your other doctors.

Palliative care specialists have expertise in symptom management and can help address side effects from surgery, radiation, or chemotherapy, and symptoms from the cancer itself. They aim to reduce the need for emergency room visits and hospitalizations. For example, colorectal cancer patients often have surgery that removes part of the bowel, which can lead to disruption in bowel habits, abdominal pain, and cramping. Sometimes ostomy surgery is needed, which is when the intestine is brought through an opening in the skin so waste can be emptied into an external bag. This surgery and related symptoms can significantly impact one’s quality of life. A palliative care team can help manage the symptoms and provide support in coping with this life-changing situation.

The sooner, the better for getting connected to palliative care.

The American Society of Clinical Oncology (ASCO) recommends patients with advanced cancer get connected with palliative care early in the disease course,
Hometown HERO

HOW SUPPORT from FRIENDS, FAMILY, & FANS HELPED Hockey Fights Cancer Ambassador AND Stage III Survivor EDDIE OLCZYK BEAT the ODDS
People told Eddie he would not make it at a lot of things as an athlete, and he proved them all wrong. But not one person told him he would lose his battle with cancer. Instead they told him he would beat it.

“That was the greatest support I’ve had and something that will stay with me for the rest of my life.”

Hockey bumps or aging. Initially, that’s what Eddie Olczyk thought he was experiencing as dull abdominal pains began.

Aches and pains were commonplace for a pro hockey player who’d been on the ice since age six and played in five world championships, three Canada cups, the 1984 Olympics, not to mention thousands of games in between.

Yet at age 51, still in great shape and never a drinker or a smoker, he soon learned cancer doesn’t play by the rules. Increasing pain and constipation led Olczyk to ask his best friend Dom to bring over Metamucil since his family was out of town. When that didn’t help, Dom drove him to the ER where one thing led to another and the unexpected news: He had stage III colon cancer.

Telling his wife Diana, college-aged kids, parents, brothers, and friends were difficult first steps, yet 10 days later, Olczyk knew it didn’t stop there. Although he would have rather crawled under a rock, his scheduled appearances as a retired Blackhawks player and current NBC commentator meant his story would go public—quickly. So, he worked with the Blackhawks to issue a press release and control the message.

“I was afraid of letting down my employers, NBC, the Blackhawks, my family—especially my kids,” Olczyk said. “But, I felt better once it became public. It was a weight off my shoulders. I’m sick. Everyone knows. Now, I’m going to focus on getting better and healthy.”

Once the news hit, both his family and hometown fans weren’t going to let their beloved “Edzo” fight alone.

SON OF CHICAGO

A “son of Chicago” as Rep. Mike Quigley referred to him as he told about his cancer from the House floor, Olczyk grew up in the suburb of Niles with loving parents and two brothers. Their supportive family values instilled the value of hard work, dedication, and integrity, which helped him learn perseverance early on, especially when many doubted his hockey career.
Thanks to his family’s unending support, he went on to shock everyone when he became the youngest player to make the U.S. Olympic hockey team at 16 years old, and the first Chicago-born player to be drafted by the Blackhawks.

“When I was extremely emotional and cried [when drafted by the Blackhawks], I also jokingly referred to North Carolina star Michael Jordan, who had been drafted by the Chicago Bulls, also third overall,” said Olczyk. “This was the first and only time Eddie Olczyk and Michael Jordan were mentioned in the same sentence.”

Olczyk would go on to play center for 16 seasons with the Blackhawks, Penguins, Maple Leafs, Jets, Rangers, (the 1994 Stanley Cup champions) and Kings, as well as serve as the Penguins’ head coach for two years before retiring as one of the top Americans in National Hockey League (NHL) history in terms of goals and total points. Fate (as well as a broadcasting opportunity) returned him to Chicago where he found success in media and became an Emmy Award-winning television commentator for the NHL and horse racing. He was inducted into the U.S. Hockey Hall of Fame in 2012.

Yet as his fame, awards, and accolades grew, there was one thing that made him most proud, the one reason he was determined to fight colon cancer: his family.

TEAM EFFORT

“I was at peace when I was sick because the most important people in my life knew how I felt about them... I knew that everybody in my life was taken care of,” Olczyk said. However, as the grueling treatments wore on, he felt beat down. “I gained 50 pounds from the steroids, I had no color in my skin, my hair looked like bacon strips,” Olczyk remembered. “It tested my will to live and broke me down; I wanted the Cliff Notes version of the disease but there is no short way through cancer.”

Hometown HERO

ILLOINOIS REP. MIKE QUIGLEY

Spoke on the House floor and used Eddie’s story to emphasize the need for earlier screenings and continued research to find a cure.

February 2018
Yet Olczyk’s support system, especially his wife of 31 years—Diana, “his rock”—wouldn’t let him give up so easily.

“I think all of us every now and then fall into a dark place where you go, ‘woe is me,’ but you’ve got to find the fight,” she wrote in Olczyk’s memoir Beating the Odds: In Hockey and in Life (Triumph Press). “I was like, ‘we’re going through it this way. You’ve got to fight for me, for the kids, for the many people who love you and are counting on you. If you don’t have the ability right now to do this for yourself, look around and do it for us.’”

The pep talk worked. According to Olczyk, “She gave me the greatest inspirational speech I ever got... and I’ve been in a few locker rooms. She helped wake me up—this was not me. We were going to do this. So, I got my hockey helmet back on and the mentality of remembering who I am. I took things day by day.”

Starting with setting small goals, Olczyk refocused and set big and small milestones like sporting events and family weddings. Fighting the temptation to quit, he tapped into his family’s strength as all of their eyes soon opened to the struggle cancer creates not only for the patient, but the caregiver.

“Caregivers may not be going through the physical part of being sick and facing treatment, but they’re going through it psychologically,” Olczyk said.

“I knew Diana would be alone and upstairs, feeling worried and scared. That’s part of why Diana and I both want people to know how critical caregivers are now.”

Caregiver needs are one of the many reasons Olczyk and his family are opening up.
“I’ve had hundreds of people say they’ve gone in and had a colonoscopy because of what happened to me,” Olczyk said. “Even if I’ve kept one person from going through what I did, it’s very gratifying.”

As he reached big and small goals, like seeing the Cubs season start back and watching his son get married one year after his diagnosis, he felt the magnitude of his story. Hundreds of pieces of fan mail showed up to the Blackhawks’ offices each week, along with requests from fellow patients or loved ones wanting to connect with him. For a guy who’d made it a point to help other people feel good about themselves, whether in the dressing room or the living room, he was receiving a dose of his own generous love. Co-commentator and longtime Blackhawks broadcaster, Pat Foley, told him:

“You’ve done so many things for so many people, partner. Now, it’s time for a little ‘getback.’ I know there’s been plenty of days when you need a little boost and a little energy and a little assistance, and we’re all here to give it to you.”

Thanks to the boosts and support, Olczyk reached one of his biggest goals: “cancer free.”

“Anything that I’ve done is more than an individual achievement; it’s a family achievement,” Olczyk said when reflecting over a life of beating the odds, ranging from sports drafts to late-stage colorectal cancer. He sees cancer as an experience that brought both changes and affirmation.

“Honestly, getting sick reassured me that I was in a really good place; I’m proud and lucky for that,” Olczyk said. “The most important people in my life knew how I felt about them before cancer, and I continue to tell them. I am at peace. Nowadays, I tell people who hear my story that I hope they laugh and love a little bit more after reading what happened to me.”

Starting in Chicago and going beyond, Olczyk’s story is inspiring many survivors to keep on going and resilient loved ones to continue rallying!
The global pandemic did more than shut down our cities, cancel our events, and strip our shelves of toilet paper. 

It also impacted clinical trials. Here’s what Dr. Scott Kopetz, the gastroenterology medical chair of oncology at MD Anderson Center, and Fight CRC board member Dr. Richard Goldberg, executive committee member of the Alliance for Clinical Trials, said.

**How has the pandemic impacted clinical trials?**

**DR. GOLDBERG:** On a conference call with the National Cancer Institute (NCI), they emphasized the number one goal is eradicating and optimizing treatment, but their observation is clinical trial renewal dropped dramatically. At the Alliance for Clinical Trials, we are keeping our clinical trials open and liberalizing criteria of when treatments need to occur, meaning people have a few extra days to get treatments. Some trials at the NCI that are not focused on survival outcomes are on hold, like quality of life research, and other things. But many trials continue to be open for accrual, especially in circumstances where we know protocol treatments save lives and when patients need access to novel therapeutics because there’s no alternative. We’re trying to enroll patients as much as we can, but I do think there will be a temporary slowing of our progress as a consequence of this.

**DR. KOPETZ:** At many clinical trial sites, there’s a reticence to enroll patients in new studies. Some centers fully shut down across the board and both basic and clinical research was halted. In addition to local and national centers, some sponsors (pharmaceutical...
companies) issued blanket statements to halt trials.

Q

What should patients do?

A

DR. KOPETZ: It’s heartening to see the community come together and recognize the unique nature of this situation. Clinical research isn’t always known for its flexibility, but we’ve seen investigators, treating centers, and sponsors recognize the most important thing is the best interest of the patient. Some trials have adapted by waiving visits, shipping drugs, and foregoing extra research tests which would have normally been done.

Oncologists are balancing the intensity of therapy with increased risk.

A

DR. GOLDBERG: I’d say to patients on a trial to try as best as they can to maintain the protocol they signed up for so we don’t lose the learning they can provide for both the benefit of themselves and other patients.

Q

What is your encouragement to patients?

A

DR. KOPETZ: It can be really scary and cause anxiety to change your treatment plan. I hope patients know this will pass. The well-oiled health care system you’re used to has been turned upside down and is undergoing a lot of disruption. But we will get back to normalcy. Patients must trust the oncologist, and although their recommendations may provoke anxiety, remember they’re trying to find what’s best.

Get more information about COVID-19 and Colorectal Cancer at fightcrc.org/coronavirus and watch our talk with Dr. Goldberg on page 20.
One of Dr. Gray’s first tweets of 2020 was a photo of him smiling alongside a patient.

Shot candidly on a mobile phone following a colonoscopy, it was a moment most would consider private. Vulnerable. But for Dr. Gray’s patient, it was a moment for advocacy.

In a world drenched in patient privacy acts, Dr. Gray could have chosen to save the photo and not post it. But with his patient’s permission and insistence, he tweeted it. It was a photo his group of more than 4,000 followers enjoyed.

“Social media matters for my patients and the broader health care community. It helps them find reliable, clinical, and public-health related information amidst the sea of misinformation,” said Dr. Gray. “And, it helps me stay abreast of innovations in science and groundbreaking research. I network with like-minded individuals and organizations across the world on social media. It lets me share my thoughts, research, and achievements with those who may not otherwise receive them but would like to.”

While social media may be one way Dr. Gray stays engaged with both patients and fellow providers, it’s also one of the many reasons he’s one of the youngest, most respected doctors adding to the conversation about colorectal cancer.

**Big Footsteps**

Watching his father practice internal medicine in Baltimore, Maryland’s inner city inspired Dr. Gray to follow in his father’s footsteps and become a medical doctor. “I was in awe of him and the impact he had on people’s lives in time of health and illness,” Dr. Gray reflected.

“The rapport he had with people from all walks of life, and the love he exhibited in what he did daily, was inspirational. My father was the spark that blossomed into a love for science and passion for patient care.”

Following high school, an already-ambitious Dr. Gray enrolled at Morehouse College in Atlanta, Georgia, the alma mater of several other accomplished men such as Martin Luther King, Jr. For medical school, he chose Howard University College in Washington, D.C., an experience that laid a foundation for his work and achievements. As an aspiring cardiologist, he’d...
planned to devote his medical career to studying the heart until mentorship from several gastroenterologists awakened his passion and calling in gastroenterology.

He completed a residency in Internal Medicine at Duke University Medical Center, a gastroenterology fellowship at Washington University in St. Louis, Missouri, and a Master’s of Public Health at Harvard T. H. Chan School of Public Health. Today, Dr. Gray serves in many roles at Ohio State University Comprehensive Cancer Center in Cleveland, Ohio: an assistant professor of medicine; director of community engagement and equity in digestive health; the medical director of endoscopy and gastroenterology services at University Hospital East; and deputy director at the Center for Cancer Health Equity.

Balancing a full plate, Dr. Gray is driven by both passion and calling.

Conversation Starter
If you search for Dr. Gray’s name online, you’ll quickly find a growing list of awards and recognitions. Not yet 40 years old, he’s often found on lists of top doctors and rising stars. When asked which awards mean the most to him, he said the Columbus CEO Practitioner of the Year, Medical Mutual Pillar Award–Philanthropist of the Year, and American College of Gastroenterology SCOPY MVP Award.

Why these three? Because his family was with him when he received them.

Behind the caring doctor and passionate researcher is a family man and a conversation catalizer. In November 2017, he joined colleagues and friends across the nation to start the #blackmeninmedicine hashtag.

To describe the campaign, Dr. Gray said:
“As there are less black men entering and matriculating through medical school than in 1978, and as we know that diversity saves lives, our goals with this social media campaign are to: provide positive role models of black men in medicine; highlight achievements of black male physicians and those aspiring to a career in medicine; inspire black men to pursue careers in medicine;

Continues to PAGE 18
provide support, mentoring, and sponsorship of women of color in medicine who face challenges at the intersection of gender and race; speak up when we witness microaggressions, sexual harassment, or harmful bias and discrimination; and ensure a safe and inclusive educational, training, and working environment for all.”

Today, the hashtag has received worldwide adoption.

**Relentless Champion**

“Dr. Gray is very easy to talk to. He listens to me patiently, answers my questions, gives explanations and treatment options; his comments are helpful and reassuring,” said one of the many online reviews posted by his patients. As a provider, he’s found a key to quality patient care: listening. As a medical provider, Dr. Gray may be young but he’s leading the way in showing how to best support patients and provide patient care. Because he’s passionate about supporting all colorectal cancer patients, Dr. Gray recently joined Fight Colorectal Cancer’s Medical Advisory Board, a small group of 30 distinguished oncologists, gastroenterologists, nurses, and researchers who ensure the information Fight CRC presents to patients is accurate and credible.

“Dr. Gray was on our radar as a thought leader in health care access and health equity based on his social media presence and respect amongst our top trusted medical advisors over the last several years,” said Andrea (Andi) Dwyer, Director, Colorado Cancer Screening Program (CCSP) at the University of Colorado Cancer Center who is an advisor to Fight CRC. “When Dr. Gray reached out to Fight CRC for collaborative research, it was clear our perspectives and goals aligned. We are stronger together and we are thrilled to have Dr. Gray join our team.”

Dr. Gray will help ensure patients are well-informed about screening and treatment options, and communicating the latest data.

“It was a natural fit,” Dr. Gray said. “I’ve been partnering with Fight CRC for years. This role provides another touchpoint for changing the narrative of colorectal cancer in our nation and working with an amazing group of volunteers, survivors, researchers, and advocates to do so.”

Sometimes relentless champions are survivors and caregivers fighting colorectal cancer together. But other times, they’re the helpers—the nurses, researchers, and medical providers like Dr. Gray—who are working to prevent cases, support patients, uncover cures, and champion hope.

**My faith, family, friends, and the patients and communities I serve.**
Talking to Kids about Cancer

Leslie Welch, MS CCLS, Childhood Development Specialist, shares important information and tips about how to talk to your kids about your cancer diagnosis.

Topics covered include: common emotional reactions kids experience when a parent has cancer; how to discuss treatment and side effects; where to seek additional support; and more.

FIGHT TOGETHER!
Here are a handful of resources that can help you stay connected to others and not fight alone.

Sexual Intimacy

Sexual health is an important topic for many cancer patients and survivors.

Dr. Sharon Bober, Founding Director of the Sexual Health Program at Dana-Farber, discusses how to navigate a variety of sexual health issues that often come up for colorectal cancer patients and survivors.

Inspire™

JOIN our COMMUNITY at INSPIRE!

Inspire is a safe, privacy-protected place where you can connect with people who share your health concerns, obtain support, and find information about colorectal cancer.

FACEBOOK GROUP FOR ADVOCATES

This group serves colorectal cancer survivors, caregivers, and others touched by the disease. We use this group as a way to provide updates to advocates, engage advocates to take action, and encourage discussion about policies that affect colorectal cancer research and screening.

BULK UP!

Looking for free, credible, medically-reviewed resources to distribute to your cancer center or support group? Look no further! Request bundles of Beyond Blue, Mini Magazines, Awareness Materials and more. Browse our online catalog or email estore@fightcrc.org.

SHOP the COLLECTION
We know 2020 hasn’t looked anything like what most of us expected.

The fight against colorectal cancer is not easy, and the coronavirus health crisis has only added to patients’ challenges and concerns. Nobody fights alone at Fight CRC, which is why our community rallied to provide patients with the latest information, practical support, expert advice, and activities that bring our community together in isolating times.

As we all continue to seek out a new normal, we hope you find these health and wellness resources helpful. Fight CRC is proud to be here for you during such a critical time for the colorectal cancer community.

Your Questions—Answered!

In a Fight CRC Facebook Live, Dr. Richard Goldberg addresses patient questions arising out of COVID-19 and covers immunosuppression, advice for newly diagnosed patients, worries about on-hold screenings and delayed treatments, and the impact of the virus on clinical trials.

Resource Line

Fight CRC’s partnership with the Cancer Support Community hotline has temporarily extended its hours during the crisis, and staff is prepared to answer questions about coronavirus and coping with social isolation. This is a free call line available in English and Spanish, and it offers translation services for more than 200 languages.

Live assistance is available from 9 a.m.–9 p.m. EST Monday–Friday, and 9 a.m.–5 p.m. EST Saturday & Sunday.

CALL-ON CONGRESS: Recap

CALL ON CONGRESS

2020 Virtual Call-on Congress

Fight Colorectal Cancer’s Call-on Congress is an annual advocacy event where we bring advocates from across the country to Washington, D.C. for a three-day event each March. Patients, family members, and advocates gather to hear from leaders in the colorectal cancer community about the latest in research, treatment, and prevention efforts.

WE NEVER GIVE UP

In January 2020, we began monitoring growing concern that the spread of coronavirus (COVID-19) would force the cancellation of events across the globe—Call-on Congress among them. By early March, we made the proactive and responsible decision for the health and wellbeing of our attendees to cancel the in-person event. Fight CRC was one of the first organizations to transform a scheduled in-person event to a successful virtual one.

SHOWING UP

All of our scheduled speakers were committed to bringing our program into the homes of hundreds of people. As a result, we had our largest audience for Call-on Congress to date.

★ **34** states represented along with the District of Columbia and Puerto Rico

★ **4,056** emails sent to Congress

★ **561** individual playbacks and **447** viewers of the live stream

★ **EVERY** Member of Congress was emailed
Palliative care is involved as long as you need.

Some patients see palliative care doctors and teams frequently, while others only see them when situations arise that their primary doctor isn’t managing. So, if you have significant chemotherapy-related symptoms that resolve when treatment ends, you may no longer need to see the palliative care doctor or team. Or, in the case of a patient with advanced disease who may undergo multiple rounds of treatment for an indefinite period, the palliative care team is there to provide help and support throughout the course of the patient’s journey. It’s based on your needs and you are always in control.

Palliative care helps your family.

Watching and caring for a loved one who is going through the cancer journey is difficult. Caregivers also suffer a great deal of emotional stress and struggle with their own self-care when they are caring for loved ones. The palliative care team is ready and available to support loved ones by providing a safe space to discuss concerns. This also includes answering questions about how to anticipate possible symptoms and side effects, and what to do should something happen.

We place a lot of importance on caregiver stress because it’s well known that patients do better when their support system is intact.

Palliative care works with your medical team.

The palliative care team shares all information with your other medical providers. They also work to ensure that everyone on your medical team—oncologist, surgeon, radiologist, nurses, and social workers—is on the same page. They track your goals of care, how you respond to treatment, and the need for changes to make the treatment process as manageable as possible.

Dr. Martins-Welch specializes in palliative care in the outpatient setting.

She focuses on global symptom management for patients with advanced illness, working collaboratively with various specialists to provide patients the most comprehensive care. Dr. Martins-Welch has a particular interest in studying the effects of early palliative care for people living with cancer.
“While the coronavirus pandemic ravaged the world earlier this year, Fight CRC knew thousands were still being diagnosed with colorectal cancer and required support to fight the disease.

So we pushed forward by supporting our community with coronavirus (COVID-19) support, but also continuing to provide valuable resources to those diagnosed with colorectal cancer.

We also wanted to hear from our community. Fight CRC hosted focus groups and surveyed patients and caregivers to learn more about their concerns and challenges during this unprecedented time.

No matter what is happening in the country, colorectal cancer doesn’t stop. It will still be diagnosed at an alarming rate among younger adults and the research into why only increases in urgency. The need for legislation to support patients and make screening accessible to all Americans does not slow down and, virus or not, newly diagnosed Americans will still seek out resources to inform urgent treatment decisions.

That is why Fight CRC always pushes forward. Relentlessly.”

Earlier this year, Fight CRC welcomed to our board Dr. Richard Goldberg, international leader in gastrointestinal cancer treatment and research. We also welcomed attorney for the Illinois Fifth District Appellate Court, Joanna Haydon, who also is a Top 10 Fundraiser for Pedal the Cause, an annual charity cycling event that raises money for cancer research at Siteman Cancer Center in St. Louis.
CALL-ON CONGRESS GOES VIRTUAL!

For the first time ever, Fight CRC took Call-on Congress online due to the coronavirus (COVID-19) pandemic. Read more about the event and its success on page 24, and you can watch the livestream back at CallonCongress.org.

WATCH the LIVESTREAM

CLIMB FOR A CURE FROM HOME

Fight CRC’s fifth annual Climb for a Cure is going virtual! We’re disappointed to have to postpone the physical Climb in Squaw Valley, but we’re excited to get climbers involved from home.

This year, our goal is to take 1 million cumulative steps to represent 1 million colon and rectal cancer survivors. Join us as we share tips on getting outside safely during COVID-19, tips on building strength for hiking, and tips on what to bring on a day out in nature.

THANK YOU TO OUR BEYOND BLUE SPONSORS!

Fight CRC Advocate Turns Staff Member!

Stage IV survivor Scott Wilson joined Fight CRC as its Mission Champion, Vice President.

Scott is an experienced business leader with more than twenty years of experience in communications, marketing, and regulatory affairs, mostly with Molson Coors Brewing Company. Scott is also a colorectal cancer survivor driven to change the future of this disease.

We often receive donations in honor of those we’ve lost in the fight.

Many times, this is “in lieu of flowers,” and, from time to time, Fight CRC also receives legacy gifts from family estates. Both are vital to continuing the important work of Fight CRC. Recently, the family estate of Kathryn West honored Fight CRC with a large gift. As our founder Nancy Roach remembers, “Kathryn’s focus was always on patients and what they needed to make decisions.” We’re honored that she chose to continue her dedication to patients through this gift.

“A life dedicated to helping those with cancer continues through gifting more than $700K to Fight Colorectal Cancer. Kathryn helped so many through direct patient care and indirectly through knowledge and education sharing. Whether it was helping you find a clinical trial or encouraging you to advocate for your needs, her legacy continues through the amazing work of Fight Colorectal Cancer whose key tenets and mission perfectly align with Kathryn’s—how she lived her life and continues to give to all of us, even today.”
